**Notification of an affected Party of a proposed plan or programme under article 10 of the Protocol on Strategic Environmental Assessment**

<i>Description of information to be included</i>	<i>Information</i>
<b>General information on the plan or programme</b>	
Name of the plan or programme	Memorandum on Scope and Level of Detail (Scoping report) and Participation plan for the National Water Programme 2028-2033
Type and sector of plan or programme (e.g., local land-use plan, national energy strategy)	National policy and management plan of the national waters and waterways.
Territorial coverage (e.g., regional, national)	National coverage. Figure Fout! Geen tekst met de opgegeven stijl in het document.-1 illustrates the NWP planning area. The NWP deals with all water in the European part of the Dutch territory. This includes the territorial sea and the Dutch Exclusive Economic Zone of the North Sea. For Drinking Water, the Caribbean part of the Netherlands also falls within the NWP implementation domain.

	 <p>The boundaries in the Eems are established according to Dutch legal interpretation. See Article 4 'Sans préjudice' and Article 5 'Material Scope' in the treaty between the Kingdom of the Netherlands and the Federal Republic of Germany concerning the use and management of the territorial sea from 3 to 12 nautical miles, on the Eems, 24-10-2014.</p>
<p>Main content and purpose of the plan or programme (e.g., framework setting for projects, determination of use of land) and its links with other plans or programmes</p>	<p>The National Water Programme (NWP) describes the main aspects of national water policy and the management of national waterways and waterways. The NWP is anchored in the Environment and Planning Act, which requires it to be updated every six years. The current NWP was adopted in 2022 and is valid until the end of 2027. The NWP is binding for the activities of the national government and influences the activities of provinces, water boards, drinking water companies, municipalities, and the broader water sector. The Netherlands' water management challenges converge in the National Water Programme (NWP) under the following themes: (1) water safety, (2) flooding, (3) freshwater availability, (4) water quality, (5) drinking water, (6) navigability of waterways, and (7) cooperation, crisis management and water awareness. An effective water policy – that anticipates the water system's limits – is crucial for the Netherlands to be future-proof and to have a good business climate and an attractive and safe living environment. This will require our water policy to include high-impact choices in the coming decades. In order to make these choices in an integrated way, consistently and with significant effect, the central government is updating the National Water Programme (NWP).</p>

	I in doing so ensuring their continued contribution to the national interests outlined in the National Strategy for Spatial Planning and the Environment (NOVI in Dutch).
